## Project Description

This is an interactive web calendar which can display any valid year the user enters. Also, there are a different color themes which change the look and feel of the app.

The following is some features of the app:

- Enter Year: User can enter a year to display
- Choose Season: User chooses one of the four seasons or the whole year to display
- Choose Theme: User chooses the color theme of the app

Notes

♦ **GitHub Usage:** The project is publicly posted on GitHub.

♦ **Testing:** All functions are tested using Jest. Also, acceptance testing is performed on all the UI elements. All tests run without failure.

♦ **Build Automation:** Software builds are automated using automated build systems and hosted on the cloud (Docker Hub), all builds are passing.

♦ **Containerization:** The software is containerized using Docker following best practices and hosted on the cloud. The software builds and runs as expected when containerized.
